

	Definitions	3							
	Process: The physical system we are								
0	Attempting to control or measure. Process Variable (PV): The specific quantity								
	Process Variable (PV): The specific quantity								
	we are measuring in a process.								
	• Setpoint (SP): The value at which we desire								
	the process variable to be maintained at								
	("target" value for the process variable).								

	Definitions	4						
	Primary Sensing Element (PSE): A device							
\bigcirc	directly sensing the process variable and							
	translating that sensed quantity into an analog							
	representation (electrical voltage, current,							
	resistance; mechanical force, motion, etc.).							
	Transducer: A device converting one							
	standardized instrumentation signal into							
	another standardized instrumentation signal,							
	and/or performing some sort of processing on							
	that signal.(Examples: I/P converter (converts							
	4-20 mA electric signal into 3-15 PSI							
\bigcirc	pneumatic signal)

-	

		Definitions		5			
	Transmitte	er : A device transl	ating the signal				
\bigcirc	produced I	by a primary sensi	ng element (PSE)				
	into a stan	dardized instrume	ntation signal such				
	as 3-15 PS	SI air pressure, 4-2	20 mA DC electric				
	current.						
	• Lower- an	d Upper-range v	alues (LRV /				
	URV): the	values of process	measurement				
	deemed to be 0% and 100% of a transmitter's						
	calibrated	range. (aka Zero a	and Span)				
\bigcirc							

5	
2	

	Definitions	6							
	Controller: A device receiving a process								
\bigcirc	variable (PV) signal from a primary sensing								
-	element (PSE) or transmitter, comparing that								
	signal to the desired value (called the set point)								
	for that process variable, and calculating an								
	appropriate output signal value to be sent to a								
	final control element (FCE) such as an electric								
	motor or control valve.								
	Final Control Element (FCE): A device								
	receiving the signal output by a controller to								
	directly influence the process.								
0									

		Definitions	
	Manipulate	d Variable (MV)	: The quantity in a
0	process we order to influ	adjust or otherw uence the proces	ise manipulate in ss variable (PV).
	• Automatic	mode: When the	e controller
	generates a	n output signal b	based on the
	relationship	of process varia	ble (PV) to the
	setpoint (SF	P).	
	• Manual mo	de: When the co	ontroller's decision-
	making abili	ty is bypassed to	o let a human
	operator dir	ectly determine t	he output signal
\bigcirc	sent to the f	inal control elem	ient.
