

Summary Basic rules of binary addition are performed by a Inputs Outputs **half adder**, which has two binary inputs (A and B) AB **C**., Σ and two binary outputs (Carry out and Sum). 0 0 0 1 1 0 1 1 0 0 0 1 0 1 1 0 The inputs and outputs can be summarized on a truth table. The logic symbol and equivalent circuit are: ΣΣ R С R 10th ed Upper Saddle River, NJ 07458. All Rights R

Summary Notice that the result from the previous example can be read directly on the truth table for a full adder. A B C. Sum Σ Σ 0 0 0 0 0 0 0 1 0 ō 0 C, Cou 0 0 C. 10th ed Saddle River, NJ 07458. All Right

	Selected Key Terms
Full-adder	A digital circuit that adds two bits and an input carry bit to produce a sum and an output carry.
Cascading	Connecting two or more similar devices in a manner that expands the capability of one device.
Ripple carry	A method of binary addition in which the output carry from each adder becomes the input carry of the next higher order adder.
Look-ahead carry	A method of binary addition whereby carries from the preceding adder stages are anticipated, thus eliminating carry propagation delays.
